

NFF Agribusiness Loan Monitor: August 2013

The National Farmers' Federation (NFF) *Agribusiness Loan Monitor* compares the movement in agribusiness loan rates of the major banks and other financial institutions to shed light on bank rates and products. This tool is designed to help farmers and rural business operators to make decisions regarding banking products.

The objective of the monitor is to track the relative movement in interest rates. The products included in these tables give the best like for like comparison for this purpose and are not meant as a comprehensive listing of all products offered by the institution to primary producers. The *Agribusiness Loan Monitor* is released each month following the Reserve Bank of Australia rate announcements. The NFF provides this valuable tool to all Australian farmers in partnership with Canstar.
